

Mounting a Staghorn to a Tree

1. Holding back the fronds, cut out the fern you wish to mount on a tree. Cut no more than 3" deep.

2. Hold fern against the tree to make sure it's in the right place before mounting.

3. With nursery tape, wrap firmly against the tree making sure to go above and below the center of the fern.

4. Add sphagnum moss to the back to fill the gap between the tree and the fern.
